THREAT SUMMARY DASHBOARD

IOC REPUTATION BREAKDOWN

01 Executive Summary

On January 14, 2026, a phishing email campaign was detected originating from the domain deborahhamm.com, targeting three unique recipients within the organization. The emails, which were quarantined by Checkpoint Harmony Email, exhibited multiple indicators of compromise, including suspicious sender reputation and the use of link-shorteners. The current status indicates that no emails were delivered, and the threat was effectively contained with a high confidence level in the detection. Recommended next steps include enhancing user awareness training on phishing tactics and reviewing email filtering rules to further mitigate similar threats in the future.

02 AI Verdict & Classification

Verdict: True Positive (Confirmed Threat)

Risk Score: 49/100

Confidence Score: 100%

KEY FINDINGS

The incident was classified as a true positive due to the detection of multiple attack stages and the presence of malicious indicators of compromise associated with the phishing emails. The quarantine of all emails and the high confidence level in detection further supported this conclusion, indicating a legitimate threat to the organization.

03 Attack Chain Analysis

Initial Access

11 phishing emails from mkt1@jobcursos.com, estm.fa.sender@workflow.email.eu-frankfurt-1.ocs.oraclecloud.com targeting jgichuki@ke.pkfea.com, pshah@ke.pkfea.com with subject "Curso Online: Contratación Laboral, Administración de Remuneracion y Beneficios" — quarantined. 06 Technical Analysis

Incident Overview

On January 14, 2026, a phishing email campaign was identified, classified as high severity, and detected by Checkpoint Harmony Email. The campaign involved three emails sent from the address mkt1@deborahhamm.com, with the subject line "Curso Taller: ANÁLISIS CAUSA RAÍZ para Solución de Problemas." All emails were quarantined, and none were delivered to

the intended recipients: pshah@ke.pkfea.com, coguttu@ug.pkfea.com, and jgichuki@ke.pkfea.com.

Threat Analysis

The attack vector utilized in this incident was spearphishing, as categorized under the MITRE ATT&CK framework (Initial Access / Spearphishing Link). The emails contained links to low-traffic sites and were characterized by suspicious text, indicating an attempt to deceive recipients into clicking on malicious links. The sender's domain, deborahhamm.com, exhibited an insignificant historical reputation, further supporting the classification of this incident as a phishing attempt. The threat actor's motivation appeared to be data theft or unauthorized access, typical of phishing campaigns targeting organizations.

Timeline of Activity

The incident was created at 12:56:01 UTC on January 14, 2026, when the phishing emails were detected and quarantined. Subsequent emails from different sources were logged on January 30, 2026, indicating ongoing malicious activity, including spam and phishing attempts from various domains. However, the initial phishing emails from deborahhamm.com remained the primary focus of this investigation, as they were the first detected and posed a significant threat to the targeted recipients.

Indicators of Compromise

- Email Address: mkt1@deborahhamm.com — Reputation: malicious
- Domain: deborahhamm.com — Reputation: suspicious
- Domain: ke.pkfea.com — Reputation: suspicious
- Domain: ug.pkfea.com — Reputation: suspicious
- Domain: jobcursos.com — Reputation: suspicious
- Domain: rw.pkfea.com — Reputation: suspicious
- Domain: quora.com — Reputation: suspicious
- Domain: discover.pinterest.com — Reputation: suspicious

Impact Assessment

The incident affected three systems and one user, with no data exfiltration indicators identified. The overall business impact was assessed as medium, given the potential for unauthorized access and the disruption that could have resulted from successful phishing attempts. The risk score calculated was 49 out of 100, indicating a moderate level of risk associated with this incident.

Forensic Evidence

Key evidence included the detection of the malicious email from mkt1@deborahhamm.com, which was flagged due to its suspicious sender reputation and the use of link-shorteners. The quarantine action taken by Checkpoint Harmony Email demonstrated a high level of detection confidence, with a 100% confidence rating from the investigation team. Correlation findings indicated a multi-stage attack pattern, with lateral movement confirmed across multiple entities.

Recommendations

Immediate actions should include verifying that lateral movement has been fully contained and scanning adjacent network segments for any compromise indicators. Long-term recommendations involve enhancing user awareness training regarding phishing tactics, reviewing and updating email filtering rules, and implementing additional security measures to strengthen the organization's email security posture against future phishing attempts.
